ON: Porcelain tile and mortar floor with SoliBlock Floor HP underlayment

TEST METHODOLOGY

Riverbank Acoustical Laboratories has been accredited by the U.S. Department of Commerce, National Institute of Standards and Technology (NIST) under the National Voluntary Laboratory Accreditation Program (NVLAP) as an ISO 17025:2005 Laboratory (NVLAP Lab Code: 100227-0) and for this test procedure. The test reported in this document conformed explicitly with ASTM E2179-03 (2009): "Standard Test Method for Laboratory Measurement of the Effectiveness of Floor Coverings in Reducing Impact Sound Transmission Through Concrete Floors" The single number rating was calculated according to ASTM E989-18: "Standard Classification for Determination of Single-Number Metrics for Impact Noise." A complete description of the measurement procedure and room specifications are available upon request. The results presented in this report apply to the sample material as received from the test sponsor.

STANDARD CONCRETE FLOOR

The laboratory's standard concrete floor is a fully cured 152.40 mm (6.0 in.) thick concrete floor installed directly in the laboratory's 4.27 m (14.0 ft.) by 2.44 m (8 ft.) test opening. No additional ceiling materials were installed over the bottom face of the concrete.

Concrete Slab

Material:	Wire-reinforced concrete
Dimensions:	4 @ 609.6 mm (24 in.) x 4267.2 mm (168 in.)
Thickness:	152.4 mm (6 in.)
Overall Weight:	3474.74 kg (7660.5 lbs)
Mass per Unit Area:	333.94 kg/m ² (68.40 lbs/ft ²)
Joints:	Underside sealed with acoustical caulk and tape Top filled with general purpose sand, sealed with ready mix compound

Note: A 0.08 mm (0.003 in.) thick polyethylene sheet was adhered with spray adhesive to the top face of the concrete slab in order to protect the slab surface.

Page 2 of 10**SPECIMEN MEASUREMENTS & TEST CONDITIONS**

The test specimen was designated by the sponsor as Porcelain tile and mortar floor with SoliBlock Floor HP underlayment. The building contractor and RAL staff compiled a detailed construction specification for the test specimen as follows, in order of installation:

Adhesive

Trade Name: Roberts 2057
Material: Vinyl composition tile adhesive
Application Tool: 1.59 mm (0.0625 in.) x 1.59 mm (0.0625 in.) x 0.79 mm (0.03125 in.) trowel
Wet Weight: 3.18 kg (7 lbs)
Installation: Spread in a thin layer over polyethylene sheet

Underlayment

Trade Name: SoliBlock Floor HP
Dimensions: 2438.4 mm (96 in.) x 4267.2 mm (168 in.) as installed
Overall Thickness: 3 mm (0.118 in.)
Overall Weight: 5.33 kg (11.75 lbs)
Mass per Unit Area: 0.51 kg/m² (0.10 lbs/ft²)
Installation: Laid over adhesive, rolled with 40.82 kg (90 lbs) flooring roller

Mortar

Trade Name: Mapei Ultraflex™ 2
Material: Polymer-modified thin-set mortar
Application Tool: 6.35 mm (0.25 in.) x 9.52 mm (0.375 in.) x 6.35 mm (0.25 in.) trowel
Thickness: Approximately 6.35 mm (0.25 in.) as installed
Mix Ratio: 2.57 L water per 11.34 kg (25 lbs) dry mix
Wet Weight: 56.36 kg (124.25 lbs)
Installation: Troweled over underlayment
Trowel lines parallel to length of concrete slab

Tile

Trade Name: Daltile LV02 12121HDIP6
Material: Porcelain
Dimensions: 304.8 mm (12 in.) x 304.8 mm (12 in.)
Thickness: 7.94 mm (0.3125 in.)
Overall Weight: 164.65 kg (363 lbs)
Installation: Laid over mortar, spaced 6.35 mm (0.25 in.) apart
Installation Date: 2019-02-12

Page 3 of 10

Grout

Trade Name: Mapei Flexcolor™ CQ
Wet Weight: 5.1 kg (11.25 lbs)
Installation: Pressed into space between tiles
Installation Date: 2019-02-13

Overall Specimen Properties

Size: 2.44 m (96.0 in) wide by 4.27 m (168.0 in) long
Thickness: 0.17 m (6.6 in)
Weight: 234.62 kg (517.25 lbs)
Transmission Area: 10.405 m² (112 ft²)
Mass per Unit Area: 22.55 kg/m² (4.62 lbs/ft²)

Test Aperture

Size: 4.27 m (14.0 ft.) by 2.44 m (8 ft.)
Filler Wall: None
Sealed: Entire periphery (both sides) with dense mastic

Test Environment

Source Room

Volume: 131.32 m³
Temperature: 22.2 °C ± 0.0 °C
Relative Humidity: 49.5 % ± 1.0 %

Receive Room

Volume: 82.64 m³
Temperature: 22.8 °C ± 0.0 °C
Relative Humidity: 49.5 % ± 1.0 %

Page 8 of 10TEST RESULTS (Continued)

The measured impact sound pressure levels (ISPL) are tabulated in each of the twenty-one standard one third octave bands from 100 Hz through 3150 Hz for both the standard concrete slab and the three sample materials. The reduction in ISPL calculated for the floor covering has been applied to a reference concrete floor with an $IIC = 28$ as described in the standard. The increase in impact insulation class, ΔIIC as well as the IIC_c for the floor covering on a reference concrete slab has also been calculated. An * indicates that the value has been adjusted for background noise levels and reflects a lower limit. A graphic presentation of the data appears on the following page.
